

Digital signage refers to the remote-controlled distribution and playback of digital content—such as TV programs, advertisements, menus, and other information—across networks of displays. These displays can vary in size, from large digital billboards to smaller screens, and can be deployed at a single location or across multiple sites. The key objective is to deliver relevant, targeted messages to the intended audience in a dynamic and engaging way.

Sureview has developed a Digital Signage application for the Android platform, offering powerful features for users. The application allows content updates via a remote web browser and supports the playback of videos, images, HTML web pages, and scrolling text messages, making it a versatile solution for modern digital communication needs
